PRODUCT GUIDE

ABOUT US

Founded in 1911, MKT Fastening, LLC manufactures reliable mechanical and adhesive anchoring and fastening systems in the USA. With over a century of experience, we have built trusted partnerships with distributors, customers, and suppliers in the construction industry.

We have invested in our production capabilities by upgrading our production equipment, allowing us to serve as a flexible partner that meets our customers' needs. Our shelves are stocked, and we are ready to fill your warehouse with top-quality fastening and anchoring systems.

We focus on building lasting relationships with our customers offering reliable solutions and serving as a flexible partner. If you are looking for reliable mechanical or adhesive anchoring systems, proudly made in the USA, we are ready to partner with you!

**Build your projects with confidence,
knowing you are supported by
DURABLE, AMERICAN-MADE PRODUCTS,
FREE FROM TARIFFS AND WORRIES!**

OUR HISTORY

1911

U.S. EXPANSION BOLT

U.S. Expansion Bolt is founded in New York, making quality mechanical expansion anchors. In 1934, the company moves to York, Pennsylvania and becomes USE. Later, the name is changed to USE Diamond.

U.S. EXPANSION BOLT

Our legacy of innovation began in 1912 with first patents for improvements in expansion bolt anchors.

1912

1934

FIRST PATENTS

We move to York, Pennsylvania and become USE Diamond. The USE product line consisted of high quality mechanical expansion anchors.

TAPER BOLT

We invented the Taper Bolt – a high strength concrete fastener and expansion anchor that set new standards in performance and reliability.

1972

1990

GUNNEBO FASTENING

Gunnebo Fastening acquires USE Diamond and merges with Uniset, creating a line of powder-actuated tools and the corresponding pins and powder loads. The USE base product line was high-quality mechanical expansion anchors. In 1985, the company developed an adhesive anchor to continue finding customer solutions.

LONOKE, ARKANSAS

The facility in York closes, and all operations are moved to Lonoke, Arkansas.

1995

1998

MKT FASTENING

The Germany-based 'MKT GmbH & Co. KG' expanded production and established 'MKT Fastening, LLC' in Arkansas. We developed customized solutions and were able to offer a complete range of metric and fractional products for the US market.

THAT'S A SOLID CONNECTION.

We aim to build partnerships with our customers, distributors, and suppliers to be as strong as the products we produce.

TODAY

TABLE OF CONTENTS

We make products as reliable and innovative as the people who use them. Today, we are the only company in the world manufacturing American-made plastic, mechanical and chemical injection anchoring systems. And we offer the best service and availability across the country. It's the MKT way.

ANCHOR DESIGN SOFTWARE NOW AVAILABLE WITH SEISMIC LOAD CALCULATION

The most easy to use anchor design software has been improved to also be the most powerful. The MKT Anchor Design software allows the designer to calculate seismic loads, including applying the Ω_0 factor for your application. All seismic calculations are according to ACI 318 and allow the designer to evaluate every load factor and load combination possible. Couple this new seismic tool with the flexibly ridge base plate evaluation tool and you get the most powerful, most versatile design package for anchor calculations available today. Simplify your anchor design calculations by downloading your copy from the Resources tab at www.MKTfasteningUSA.com. MKT Fastening ...a solid connection.

ANCHORING SYSTEMS

SUP-R[®] STUD[®] +

AVAILABLE MATERIALS

- Carbon steel, zinc plated
- Carbon steel, mechanically galvanized Class 65
- Grade 5, yellow di-chromated
- 303/304 stainless steel
- 316 stainless steel

FEATURES/ADVANTAGES

- Anchor and hole share the same diameter for a tight fit
- Fast installation with immediate load-bearing capability
- Allows installation in bottomless holes for simple and hassle-free setting
- Nut and washer supplied in package
- ROHS compliant except for Grade 5
- Custom thread lengths available by special order.

APPROVALS/LISTINGS

- G.S.A. Spec A-A-1923A, CID TYPE 4
- ICC ESR-3782 C-STL, ZP 1/4" SS
- Contact customer service for approvals / listings for state D.O.T.'s

CONSIDERATIONS

- Do not use in brick or block
- Not advised for use where vibratory loads are high
- Oversize holes are detrimental and will reduce load performance

* To obtain 100% load

INSTALLATION

- 1 Select the correct diameter drill bit, drill a hole to minimum required hole depth or deeper.
- 2 Remove drilling debris from the bottom of the drill hole using a blowout bulb, compressed air or vacuum.

- 3 Assemble the nut & washer past the impact end of the SRS+. Use a hammer to tap the anchor through the part being fastened into the drilled hole until the washer is in contact with the part.
- 4 Using a torque wrench, apply the specified installation torque.

* Tested in 3000 P.S.I. Concrete

INSTALLATION

- 1 Drill hole to at least shield length.
- 2 Clean hole of debris.
- 3 Place the Forway in the hole.
- 4 Position equipment. Insert machine bolt through equipment into shield.
- 5 Tighten.

For hanger rod installation

- 1 Thread a hex nut onto the hanger rod, add a flat washer, then screw the Forway against the washer.
- 2 Place the Forway in the hole.
- 3 Expand the Forway by tightening the hex nut against the surface of the base material.

TAPER BOLT®

AVAILABLE MATERIALS

- Grade 5, zinc plated
- Other metals and finishes are available by special quote
- Eye bolt version available by special quote

FEATURES/ADVANTAGES

- Required hole diameter equals anchor diameter
- Variation in hole size can be accommodated by turning the expander nut
- Equipment may be removed and replaced. The bolt is simply re-inserted and torqued to obtain original holding power (the nut stays in the hole)
- Bolt can be removed and re-used with a new nut after cleaning and lubricating the threads
- Strength - the highest shear strength of any expansion anchor
- Withstands vibratory loads
- Works in a bottomless hole

APPROVALS/LISTINGS

- Tested by Pittsburgh Testing Laboratory PG-2170
- Contact customer service for approvals/ listings for state D.O.T.'s

CONSIDERATIONS

- Head clearance critical to anchor effectiveness

INSTALLATION

- 1 Drill hole the same diameter as the Taper-Bolt using fixture as a template.
- 2 Clean hole of debris.
- 3 Drive Taper-Bolt into place leaving recommended head clearance. If hole is oversized simply remove and pre-expand the expander nut to fit hole.
- 4 Tighten Taper-Bolt to recommended torque.
- 5 For big jobs, set Taper-Bolt with an impact wrench. This method offers speed, consistency and greater installer productivity.

TAP-IT®

TAP-IT® NYLON WASHER

**AVAILABLE MATERIALS**

Nylon Tap-It body with:

- Carbon steel nail, zinc plated
- Aluminum nail, bulk only
- Zinc plated nail available in bulk pack
- High strength nylon

FEATURES/ADVANTAGES

- Light to medium loads under dead, variable, or vibratory conditions in solid or hollow base materials

APPROVALS/LISTINGS

- G.S.A. Spec A-A-1925A, CID Type 3

FEATURES/ADVANTAGES

- Acts as a bearing surface when anchoring through soft material into concrete or other suitable base materials

APPROVALS/LISTINGS

- G.S.A. Spec A-A-1925A, CID Type 3

HEAVY DUTY

ANCHORING SYSTEMS

SZ HIGH LOAD ANCHOR

AVAILABLE MATERIALS

- High strength steel
- Flat head style available by special order

FEATURES/ADVANTAGES

- ACI 318 category 1 anchor for cracked or uncracked concrete
- Required hole diameter equals anchor diameter
- Equipment can be removed. The bolt and sleeve can be removed for a flush surface. The expansion sleeve and cone remain in the hole.
- Exceptional strength coupled with the ability to resist seismic loads.
- Category A-F
- Metric dimensions for international use.
- Collapsible sleeve allows for secure clamping force.
- Embedment depth is marked on each anchor for easy installation.
- Multiple head styles available.

APPROVALS/LISTINGS

- European Technical Approval ETA-02/0030
- Tested by the University of Stuttgart
- ICC ESR-3173 (M12-M28 carbon steel and M12-M24 316 stainless steel)
- ACI 318 category 1

CONSIDERATIONS

- Do not use in brick or block
- Must be installed with a metric drill bit

1) A safety factor of 1.48 was used to calculate the allowable loads. This is based on a load combination of 30% dead loads and 70% live loads.

INSTALLATION

- 1 Drill hole to recommended size and depth.
- 2 Remove dust, rubble from the hole with compressed air.
- 3 Using a hammer, tap the anchor through the material to be fastened until the anchor is firmly seated.
- 4 Tighten the anchor to the specified torque.

MEDIUM DUTY

ANCHORING SYSTEMS

SUP-R DROP

AVAILABLE MATERIALS

- Carbon steel, zinc plated
- 304 stainless steel
- 316 stainless steel

FEATURES/ADVANTAGES

- Ideal for flush-mounting applications
- Preassembled for ease of installation
- Female threads accept standard UNC bolts or threaded rods (1/4" to 3/4")
- Slotted body is precision-matched to tapered internal plug for uniform expansion
- Knurled body increases friction connection between anchor and wall of hole

APPROVALS/LISTINGS

- G.S.A. Spec A-A-55614
- UL listed 3/8"-3/4"
- FM 3/8" - 1/2" & 3/4"
- Contact customer service for approvals

CONSIDERATIONS

- Dead load only
- Hole depth must be equal to anchor length
- Do not over torque

SUP-R BOLT

AVAILABLE MATERIALS

- Carbon Steel, zinc plated
- 316 Stainless Steel

FEATURES/ADVANTAGES

- Required hole diameter equals anchor diameter
- Designed for standard ANSI tolerance drill bits
- Hardened threads for tapping high strength concrete
- Anti-rotation teeth on underside of hex washer head lock against the fixture
- Can be installed closer to the edge than traditional expansion anchors
- Fast installation with powered impact wrench
- Diameter, length and identifying marking stamped on head of each anchor
- One-piece, finished head design
- Equipment can be removed.
- Able to resist seismic loads.

APPROVALS/LISTINGS

- ICC-ES ESR 4347
- ACI 318 category 1 for cracked concrete
- ICC ESR-5359 - Masonry

CONSIDERATIONS

- Do not use in brick or hollow block
- Do not reuse

INSTALLATION

- 1 Drill hole to recommended diameter and depth.
- 2 Remove dust, rubble from the hole with compressed air.
- 3 Assemble the proper socket size onto an impact or torque wrench. Insert the anchor through the item being fastened and into the hole.
- 4 Tighten the anchor to the specified torque making sure the head is firmly against the item being fastened.

SUP-R SLEEVE

AVAILABLE MATERIALS

- Carbon steel, zinc plated
- 304 stainless steel on select sizes

FEATURES/ADVANTAGES

- Length of sleeve makes anchor more forgiving than a wedge anchor and induces less stress on the substrate
- Can be used in solid or hollow masonry
- Works in a bottomless hole
- Required hole diameter equals anchor diameter
- Supplied assembled with 4 possible head styles

APPROVALS/LISTINGS

- G.S.A. Spec A-A-1923A
- Contact customer service for approvals

CONSIDERATIONS

- Do not over-torque

AVAILABLE HEAD STYLES

ACORN NUT

HEX NUT

FLAT HEAD

ROUND HEAD

INSTALLATION

- 1 Select a carbide-tip drill bit with same nominal diameter as anchor body. Drill hole depth 1/2" to 1" deeper than anchor embedment.
- 2 Clean hole of debris.
- 3 Set nut flush with top of anchor and drive anchor through material to be anchored into the work surface until nut and washer are snug with material to be attached.
- 4 Tighten nut until finger tight, then turn 3 to 4 full turns to set the expansion sleeve.

1) A safety factor of 1.48 was used to calculate the allowable loads. This is based on a load combination of 30% dead loads and 70% live loads.

INSTALLATION

- 1 Select the correct diameter drill bit, drill a hole to minimum required hole depth or deeper.
- 2 Remove drilling debris from the bottom of the drill hole using a brush and a blowout bulb, compressed air or vacuum.
- 3 Assemble the nut & washer past the impact end of the SRS V-TZ. Use a hammer to tap the anchor through the part being fastened into the drilled hole until the washer is in contact with the part.
- 4 Using a torque wrench, apply the specified installation torque.

SUP-R[®] STUD + INTERNAL THREAD

AVAILABLE MATERIALS

- Carbon steel, zinc plated
- 304 / 316 Stainless Steel

FEATURES/ADVANTAGES

- Can be installed in an ANSI standard hole
- The fixture is easily removed
- Closer anchor spacing and edge distance than with drop-in
- Can be set in a bottomless hole
- No unsightly stud protruding from hole

APPLICATIONS:

- Medium duty anchoring where the use of internal thread is required and/or anchor spacing and edge distance are closer than those needed for drop-in anchor: Suspended ceilings, fastening of flat steel structures, ducts, vent systems, railings, etc.

APPROVALS/LISTINGS

- Jobsite approvals for North Dakota, South Carolina, Vermont

CONSIDERATIONS

- Use in solid concrete only

*Load values are based on using A307 bolts to complete the fastening. When installing the SRS+ IT through the item fastened, add the fixture thickness to the setting depth in the table

INSTALLATION

- 1 Select the correct diameter drill bit and drill the hole to the required hole depth.
- 2 Remove the debris from the hole using a blowout bulb, compressed air, or a vacuum.
- 3 Thread the setting bolt into the anchor adjusting for setting depth as per the chart.
- 4 Place the anchor in the hole(1) and hammer the setting bolt until the washer makes contact with the surface of the concrete(2).
- 5 Remove the bolt (1) and place the fixture over the hole (2), Start the bolt through the fixture into the anchor.
- 6 Tighten the bolt to required torque as per table, Once the appropriate torque is achieved, the anchor is set.

LIGHT DUTY
ANCHORING SYSTEMS

AVAILABLE MATERIALS

- Extruded lead shield with a diecast zinc expander nut

FEATURES/ADVANTAGES

- Light to medium loads under dead or variable conditions in a variety of solid masonry
- Lead flows into hole irregularities, making base material firmer than before anchoring
- Highly corrosion resistant
- Can remove or replace fixture and refasten without loss of holding power
- Setting tool included in each box

- 5 Tighten screw.

CONSET

AVAILABLE MATERIALS

- High strength steel
- Flat head and hex head

FEATURES/ADVANTAGES

- For use in all types of solid & hollow masonry, wood and stone
- Fluorocarbon coating offers high resistance to corrosion
- Cuts its own threads
- Hex head version offers 2 drive methods
- Fast, easy installation
- Drill bit included in each box
- Coating withstands 1000 hours of salt spray test

APPROVALS/LISTINGS

- Miami Dade approved
- Tested in accordance with AC193, AC106, AC233, AC257

CONSIDERATIONS

INSTALLATION

- 1 Insert the masonry drill bit in the bit holder and drill the pilot hole 1/2" deeper than fastener penetration. The driving sleeve or main body of the Conset tool is snapped into position over the drill bit.
- 2 Clean hole of debris.
- 3 Position the material being fastened, and drive the Conset anchor into the masonry, under rotation only.

SUP-R SPLIT

AVAILABLE MATERIALS

- High strength, heat treated alloy steel, zinc plated
- Flat head
- Nickel rich electroplate for corrosive environments (167412OCR + 167414OCR)

FEATURES/ADVANTAGES

- Required hole diameter equals anchor diameter
- Friction set in solid masonry or stone
- High strength, heat treated alloy steel
- Corrosion resistant (CR) for use in harsh climates or with ACQ lumber

APPROVALS/LISTINGS

- G.S.A. Spec A-A-1925A, CID TYPE 2
- Contact customer service for approvals

CONSIDERATIONS

- Dead loads only

SELF-DRILLING WALLBOARD

AVAILABLE MATERIALS

- Zinc diecast alloy
- High strength nylon

CONSIDERATIONS

- Hollow wall anchoring only

FEATURES/ADVANTAGES

- Works in any wallboard thickness
- Can be easily backed out
- Low profile head
- Fast, easy installation
- Zinc Anchor can be set with a 1/4" hex bit tip

- Screw anchor clockwise applying forward pressure until head is flush to wall.
- Place fixture over hole and tighten #8 or #10 sheet metal screw.

HOLLY

AVAILABLE MATERIALS

- Multi-legged sheet metal shell with machine screw, zinc plated

FEATURES/ADVANTAGES

- Light to medium loads under dead or variable conditions in a variety of hollow base materials
- Expanded, the shell is permanently installed and fixtures can be exchanged by removing and replacing the screw
- Drive Holly does not require a pre-drilled hole in gypsum board

CONSIDERATIONS

- Hollow construction only

Setting Tool

0110000	Holly Setting Tool							1	—
---------	--------------------	--	--	--	--	--	--	---	---

INSTALLATION

- Drill hole through the base material same diameter as fastener.
- Clean hole of debris.
- Insert the fastener through the material and tap until head is flat against the wall surface.
- Turn screw with screwdriver until fastener is expanded. Can also be set using a Holly Setting Tool.
- Remove screw.
- Place fixture. Replace screw through fixture and tighten.

AVAILABLE MATERIALS

- Zinc diecast alloy

FEATURES/ADVANTAGES

- Medium to heavy loads
- Can be used in dead, variable, or vibratory conditions in all types of solid masonry
- Cannot be over-expanded, excellent near edge of slabs

APPROVALS/LISTINGS

- G.S.A. Spec A-A-1923A, CID TYPE 1

ZAP-IT®

AVAILABLE MATERIALS

Zinc Zap-It body with:

- Carbon steel nail, zinc plated
- Stainless steel nail

FEATURES/ADVANTAGES

- Required hole diameter equals anchor diameter
- Fast, easy installation
- Stainless steel nail and zinc anchor body allow for fastening in outdoor applications

CONSIDERATIONS

- Dead loads only
- Not recommended for eccentric loading

28 Oz. Twin Tube

AVAILABLE MATERIALS

- Twin/Single Tube-hybrid urethane resin base, benzoyl peroxide hardener
- Square cut rods-A307 steel, zinc plated. Other sizes, materials and finishes available

FEATURES/ADVANTAGES

- Multi temperature formulation is suitable for use down to 23°F (-5°C)
- Fast cure time even at the coldest temperatures
- Styrene free formula is low odor and VOC free
- Ideal for bonding a wide variety of material to concrete
- In service temperatures of up to 320°F (160°C).
- Extremely high chemical resistance.
- Certified for drinking water applications to NSF Standard 61.
- Nozzle provided for dispensing

No reductions have been taken for edge distance or anchor spacing. Verify that strength of the steel used is capable of supporting the desired load for each application.

LIQUID ROC® 200

USAGE INSTRUCTIONS - CONCRETE

MAC: Cleaning for hole diameter d0 3/4" and hole depth h0 10dS (uncracked concrete only!)

1. Hammer drill a hole into the base material to the diameter and embedment depth required by the selected anchor.
- 2a. Starting from the bottom or the back of the drilled hole, blow the hole clean by a hand pump a minimum of four times
- 2b. Check the brush diameter. Brush the hole with an appropriate sized wire brush > db, min a minimum of four times in a twisting motion. If the bottom of the drilled hole is not reached with the brush, a brush extension must be used.
- 2c. Finally blow the hole clean again with a hand pump a minimum of four times.

CAC: Cleaning for all hole diameter in uncracked and cracked concrete

- 2a. Starting from the bottom or back of the hole, blow the hole clean with compressed air (min. 90 psi) a minimum of two times until return air stream is free of noticeable dust. If the bottom of the drilled hole is not reached an extension must be used.
- 2b. Check the brush diameter. Brush the hole with an appropriate sized wire brush > db, min a minimum of two times in a twisting motion. If the bottom of the drilled hole is not reached with the brush, a brush extension must be used.
- 2c. Finally blow the hole clean again with compressed air (min. 90 psi) a minimum of two times until return air stream is free of noticeable dust. If the bottom of the drilled hole is not reached an extension must be used.

After cleaning, the hole has to be protected against re-contamination in an appropriate way, until dispensing the adhesive in the hole. If necessary, the cleaning has to be repeated directly before dispensing the adhesive. In water-filled hole applications, the water must not be allowed to re-enter the hole.

LIQUID ROC® 300 CAPSULE

AVAILABLE MATERIALS

- Capsules – polyester resin base, quartz sand, benzoyl peroxide hardener
- Chamfer cut rods – A307 steel, zinc plated. Other sizes, materials and finishes available upon request

FEATURES/ADVANTAGES

- Pre-measured adhesive
- No expensive dispensing tools
- Sand and aggregate mixture is closest to natural concrete

CONCERNS

- Hole must be of correct diameter and depth
- Do not use overhead
- Must use chamfer cut or chisel pointed rod
- 24 month shelf life
- For short term loading only

INSTALLATION

- 1 Drill hole to correct size and depth using rotary-hammer.
- 2 Remove dust and rubble from the hole with compressed air, a brush and water. Excess water must be removed although the hole may be damp.
- 3 Insert the capsule in the hole, either end first.
- 4 Double nut the threaded rod, and insert the chamfered stud into the hole to break the capsule. Under power, hammer drill the chamfered stud to full depth, maintaining power for two or three seconds after the chamfered stud bottoms.
- 5 Promptly and carefully remove the drive socket from the stud, leaving it undisturbed through the prescribed curing time consistent with onsite temperature.

LIQUID ROC® 300 POUCH

AVAILABLE MATERIALS

- Pouch - polyester resin base, benzoyl peroxide hardener
- Square-cut rods- A307 steel, zinc plated. Other sizes, materials and finishes available upon request

FEATURES/ADVANTAGES

- No dispensing tools needed
- Pre-measured adhesive
- No messy mixing
- Will cure below freezing
- Pourable consistency

CONSIDERATIONS

- Cannot be used in horizontal or overhead holes
- Must be used within 20 minutes after mixing

INSTALLATION

- 1 Drill hole to correct size and depth using rotary-hammer.
- 2 Remove dust and rubble from the hole with compressed air, brush and water. Excess water must be removed although hole may be damp. Hold each end of the pouch and pull firmly to remove dividers. Mix thoroughly in pouch until color is uniform. Do not use excessive pressure or puncture pouch while mixing.
- 3 Cut corner and fill hole 2/3 full.
- 4 Insert stud turning slowly by hand.
- 5 Leave it undisturbed through prescribed curing time consistent with the on-site temperature.

USAGE INSTRUCTIONS - CONCRETE

MAC: Cleaning for hole diameter d0 3/4" and hole depth h0 10dS (uncracked concrete only!)

1. Hammer drill a hole into the base material to the diameter and embedment depth required by the selected anchor.
- 2a. Starting from the bottom or the back of the drilled hole, blow the hole clean by a hand pump a minimum of four times
- 2b. Check the brush diameter. Brush the hole with an appropriate sized wire brush > db, min a minimum of four times in a twisting motion. If the bottom of the drilled hole is not reached with the brush, a brush extension must be used.
- 2c. Finally blow the hole clean again with a hand pump a minimum of four times.

CAC: Cleaning for all hole diameter in uncracked and cracked concrete

- 2a. Starting from the bottom or back of the hole, blow the hole clean with compressed air (min. 90 psi) a minimum of two times until return air stream is free of noticeable dust. If the bottom of the drilled hole is not reached an extension must be used.
- 2b. Check the brush diameter. Brush the hole with an appropriate sized wire brush > db, min a minimum of two times in a twisting motion. If the bottom of the drilled hole is not reached with the brush, a brush extension must be used.
- 2c. Finally blow the hole clean again with compressed air (min. 90 psi) a minimum of two times until return air stream is free of noticeable dust. If the bottom of the drilled hole is not reached an extension must be used.

After cleaning, the hole has to be protected against re-contamination in an appropriate way, until dispensing the adhesive in the hole. If necessary, the cleaning has to be repeated directly before dispensing the adhesive. In water-filled hole applications, the water must not be allowed to re-enter the hole.

VMZ INTERNAL THREAD INJECTION SYSTEM

AVAILABLE MATERIALS

Carbon Steel Zinc Plated

FEATURES/ADVANTAGES

- Can be installed using a construction grade single tube tool
- The fixture is easily removed
- Closer anchor spacing and edge distance than with drop-in anchors
- Rated for cracked or un-cracked concrete
- Eliminates trip hazard by using finished head bolts
- Ultimate loads are derived from installation in un-cracked concrete

CONSIDERATIONS

- 18 month shelf life

APPLICATIONS:

Heavy duty anchoring where the use of internal thread is required and/or anchor spacing and edge distance requirements are closer than those needed for drop-in anchor: Steel structures, brackets, railings, posts, columns, ladders, gates, etc.

INSTALLATION

- 1 Select the correct diameter drill bit and drill the hole to the required hole depth.
- 2 Remove the debris from the hole using compressed air and a brush.
- 3 Inject VMZ adhesive into the hole starting at the bottom and working outward to avoid air pockets.
- 4 Place the anchor in the hole using a twisting motion until it is flush with the concrete.
- 5 Do not disturb the anchor until full cure has been reached as indicated by the table above.
- 6 Clear excess adhesive from the hole opening using a chisel before removing rubber plug.
- 7 Place fixture over the hole and start the bolt until finger tight.
- 8 Tighten bolt to appropriate torque to complete the fastening.

EP800 PURE EPOXY

AVAILABLE MATERIALS

- Pure Epoxy

FEATURES/ADVANTAGES

- Compliant with the newest design codes
- OSHA compliant
- Qualified for seismic design (Category A-F)
- Suitable for heavy anchoring and post-installed rebar connection
- High chemical resistance
- Low odor
- High bending and pressure strength
- Maximum performance in concrete
- The cartridge, can be reused up to the end of the shelf life by replacing the static mixer or resealing the cartridge with the sealing cap

INSTALLATION

Drilling of the bore hole (HD, CD; HDB) - ESR-4901

Precaution: Wear suitable eye and skin protection. Avoid inhalation of dusts during drilling and/or removal. (see dust extraction equipment by Chemofast to minimize dust emissions)

1. Drill a hole into the base material with a hammer drill tool to the size and embedment required by the selected steel hardware element (see Table on page 12). The tolerances of the carbide drill bit must meet the requirements of ANSI Standard B212.15. For bore holes drilled with the Chemofast hollow drill bit system (consisting of Heller Duster Expert drill bits and a Class M vacuum with air flow 150 m³/h resp. 42 l/s resp. 90 cfm; the vacuum must be on!) no further cleaning is required go to Step 3, otherwise to Step 2a for MAC or CAC hole cleaning instructions.

Attention! Standing water must be removed (e.g. vacuum, compressed air, etc.) prior to cleaning.

CAC: Cleaning (dry, water saturated and water-filled) for all drill hole diameter in uncracked and cracked concrete

2a.

Starting from the bottom or back of the anchor hole, blow the hole clean with compressed air (min. 6 bar / 90 psi) a minimum of two times, until return air stream is free of noticeable dust. If the back of the drilled hole is not reached an extension shall be used.

2b.

Determine brush diameter (see Table on page 12) for the drilled hole. Brush the hole with the selected wire brush a minimum of two times (2x). A brush extension (supplied by Chemofast Anchoring GmbH) must be used for drill hole depth > 6" (150 mm). The wire brush diameter must be checked periodically during use ($\phi_{brush} > d_{b,min}$ see Table on page 12). The brush should resist insertion into the drilled hole - if not the brush is too small and must be replaced with the proper brush diameter. If the back of the drilled hole is not reached a brush extension shall be used.

2c.

Finally blow the hole clean again with compressed air (min. 6 bar/ 90 psi) a minimum of two times, until return air stream is free of noticeable dust. If the back of the drilled hole is not reached an extension shall be used. When finished the hole should be clean and free of dust, debris, ice, grease, oil or other foreign material.

EP800 PURE EPOXY CONTINUED

INSTALLATION

UWC: Cleaning (submerged) for all bore hole diameter in uncracked and cracked concrete

2a.

Starting from the bottom or back of the bore hole, rinse/flush the hole clean until clean water comes out. If the back of the drilled hole is not reached an extension shall be used.

2b.

Determine brush diameter (see Table on page 12) for the drilled hole. Brush the hole with the selected wire brush a minimum of two times (2x). A brush extension (supplied by Chemofast Anchoing GmbH) must be used for drill hole depth > 6" (150 mm). The wire brush diameter must be checked periodically during use ($d_{brush} > d_{b,min}$ see Table on page 12). The brush should resist insertion into the drilled hole - if not the brush is too small and must be replaced with the proper brush diameter. If the back of the drilled hole is not reached a brush extension shall be used.

2c.

Finally, starting from the bottom or back of the bore hole, rinse/flush the hole clean until clean water comes out. If the back of the drilled hole is not reached an extension shall be used.

After cleaning, the bore hole has to be protected against re-contamination in an appropriate way, until dispensing the mortar in the bore hole. If necessary, the cleaning has to be repeated directly before dispensing the mortar. In-flowing water must not contaminate the bore hole again.

3.

Check adhesive expiration date on cartridge label. Do not use expired product. Review Safety Data Sheet (SDS) before use. For the permitted range of the base material and cartridge temperature see Table on page 4. Attach a supplied mixing nozzle to the cartridge. Do not modify the mixer in any way and make sure the mixing element is inside the nozzle. Load the cartridge into the correct dispensing tool.

Note: Always use a new mixing nozzle with new cartridges of adhesive and also for all work interruptions exceeding the published gel (working) time of the adhesive.

4.

Prior to inserting the anchor rod or rebar into the filled drilled hole, the position of the embedment depth has to be marked on the anchor. Verify anchor element is straight and free of surface damage.

5.

Adhesive must be properly mixed to achieve published properties. Prior to dispensing adhesive into the drilled hole, separately dispense at least three full strokes of adhesive through the mixing nozzle until the adhesive is a consistent gray or red color. Review and note the published working and cure times (see Table on page 4) prior to injection of the mixed adhesive into the cleaned anchor hole.

6.

Fill the cleaned hole approximately two-thirds full with mixed adhesive starting from the bottom or back of the anchor hole. Slowly withdraw the mixing nozzle as the hole fills to avoid creating air pockets or voids. If the bottom or back of the anchor hole is not reached with the mixing nozzle only an extension tube supplied by Chemofast Anchoing GmbH (Cat# 16009 or Cat# 16004) must be used with the mixing nozzle.

ENGINEERING DATA

HOW TO SPECIFY

- 1 Select anchor diameter based on loading requirements.
- 2 Determine thickness of material to be anchored (if grout or shimming is to be used between material and concrete surface, add thickness of grout/shims to thickness of material to obtain total thickness of material to be anchored.)
- 3 Select anchor length that will satisfy total thickness of material, head clearance and embedment of anchor diameter selected.

REDUCTION FACTORS

Tension		Shear		
Spacing (S) and Edge Dist. (M)	Factor (F)	Spacing (S) and Edge Dist. (M)	Direction of load	Factor (F)
S min. = 0.50S	0.7	S min. = 0.50S	toward edge	0.6
			not toward edge	1.0
M min. = 0.50M	0.7	M min. = 0.50M	toward edge	0.4
			not toward edge	0.5

FOR REDUCED SPACING AND EDGE DISTANCES

- 1 Linear interpolation is allowed for edge distances falling between 0.50M and 1.00M, and anchor spacing falling between 0.50S and 1.00S.
- 2 Load reduction factors should be combined where applicable. Where three or more anchors are used, spacing reduction factors must be multiplied together. Where two or more edge distances affect performance, edge reduction factors must be multiplied together. When a group of anchors is affected by both reduced spacing and reduced edge distances, the edge and spacing reduction factors must be multiplied together.

GENERAL SPECIFICATIONS

Adhesive resin anchor shall be polyester, epoxy, acrylic, hybrid-urethane as manufactured by MKT Fastening, LLC, #1 Gunnebo Dr., Lonoke, AR 72086.

INSTALLATION

Adhesive resin anchors shall be installed in holes drilled with carbide tipped bits conforming to ANSI specification B212.15-94. Minimum installation depth and hole preparation shall be as recommended by manufacturer.

TERMS & CONDITIONS OF SALE

MINIMUM BILLING

Minimum billing is \$100.00. Concrete Anchor Systems (USE - MKT), Adhesive Fastening Systems (Liquid Roc).

FREIGHT POLICY

All freight charges are prepaid from our shipping warehouse to one destination where the total order exceeds \$1,500.00 (Hawaii and Puerto Rico prepaid on \$4000.00). Air freight shipments are F.O.B. our shipping location. We will absorb all freight costs of back orders if the original order qualified for prepaid freight. Our responsibility ceases when the carrier signs the shipping manifest. All claims for shortages and or damage must be settled by the distributor and the carrier. Please note: Liquid Roc 300 cannot be shipped parcel post, 1st class mail, air parcel post, bus, commercial air lines or UPS air from external warehouses. USE - MKT, Liquid Roc and EP800 products may be combined to meet freight minimums.

RETURNS & SHORTAGES

All returns must be preapproved by the MKT Customer Service Department at 1-800-336-1640 with appropriate R.G.A. number. Returned product must be of current production and in new and saleable condition. Adhesive materials can only be returned within 30 days from the date of original purchase. All returns are subject to a 25% restocking fee. If inspection shows that the product must be replaced, repackaged, or otherwise reworked, a reworking charge will be made. Credits for returned merchandise will be issued at the distributors purchase price or current price, whichever is lower. Credits will be issued against future orders. Notification of shipping and invoice discrepancies must be made within 30 days in writing.

Terms are net 30 days. Accounts not paid within 30 days from the net due date will be charged a 1-1/2% per month service charge or applicable state interest allowed.

LIMITATION OF LIABILITY

Neither seller nor manufacturer has any knowledge or control concerning the purchaser's use of the product. No express warranty is made by seller or manufacturers with respect to the results of any use of the product. NO IMPLIED WARRANTIES, INCLUDING BUT NOT LIMITED TO AN IMPLIED WARRANTY OF MERCHANTABILITY, OR AN IMPLIED WARRANTY OF FITNESS FOR A PARTICULAR PURPOSE, ARE MADE WITH RESPECT TO THIS PRODUCT. Neither seller nor manufacturer assumes any liability for personal injury, loss or damage resulting from the use of this product. In the event that the product shall prove defective, buyers exclusive remedy shall be as follows: Seller or manufacturer shall, upon written request of buyer, replace any Qty. of the product which is proven to be defective, or shall, at its option, refund the purchase price for the product upon return of the product. PURCHASER'S TRAINING OBLIGATION AND INDEMNIFICATION LIABILITY FOR POWDER ACTUATED TOOLS As a term of sale or transfer, the purchaser recognizes that powder tools can be dangerous instruments if placed in the hands of untrained personnel. Purchaser therefore agrees that it has the obligation to properly train all who will use or reasonably be expected to use or handle any powder tools sold or transferred herein. Purchaser agrees that only individuals who have been properly trained in the safe and proper use and handling of the powder tool(s) sold or transferred herein, will be permitted to handle or operate same. PURCHASER AGREES TO INDEMNIFY MKT FASTENING WITH RESPECT TO ANY AND ALL LIABILITY FOR INJURY OR DAMAGE TO PROPERTY OR PERSON (INCLUDING BUT NOT LIMITED TO TOOL OPERATORS) OCCASIONED BY THE USE OR OPERATION OF POWDER ACTUATED TOOLS BY ANY PERSON, INCLUDING ANY EMPLOYEE OR SUBCONTRACTOR, WITHOUT PROPER TRAINING AND CERTIFICATION.

MKT Fastening agrees to provide Purchaser with authorized training upon request in order to assist Purchaser with its obligation to train as set forth above. However, MKT's offer to train, whether or not accepted by the Purchaser, in no manner diminishes Purchaser's obligation to train as set forth above. Purchaser's training obligation continuously remains with Purchaser and extends to any and all individuals who may be called upon in the future to operate or handle the tools sold or transferred herein.

WARRANTY

ALL WARRANTIES OF THE PRODUCTS DESCRIBED HEREIN, EXPRESSED OR IMPLIED, INCLUDING THE WARRANTIES OF MERCHANTABILITY AND FITNESS FOR PARTICULAR PURPOSES ARE SPECIFICALLY EXCLUDED EXCEPT FOR THE FOLLOWING: THIS IS THE SOLE WARRANTY OF MKT FASTENING AND THE SOLE REMEDY AVAILABLE TO DISTRIBUTORS OR BUYER.
